
Locating the interferer from its aliases
(a) Every rate folds a true frequency differently (scope-less run 19:55)
Apparent frequency in codes (MHz)
2 MSPS fold
observed at 2 MSPS: 154 kHz
6 MSPS fold
observed at 6 MSPS: 2156 kHz
10 MSPS fold
observed at 10 MSPS: 1844 kHz
(b) Only a few frequencies line up with all three observed peaks
Spectrum above floor at all three aliases (dB, summed)
scope-less run 19:55: best 8.15 MHz
scope re-run 20:41: best 8.38 MHz
Repeats every 30 MHz (LCM of 2, 6, 10 MHz) and mirrors about 15 MHz: 8.15 ≡ 21.85 MHz
Candidate true interferer frequency (MHz)
